

**Response****Serial No. 10/023,621****Page 8****AMENDMENTS TO THE SPECIFICATION**

Please cancel the amendment to the Specification requested in the amendment filed on 12/1/03 requesting the replacement of the paragraph at page 4, lines 9-11.

A. Instead, in the Detailed Description of the Invention section of the Applicant's Specification, on page 4, beginning on line 9, please replace the paragraph beginning with "As shown in Figure 2" and ending with "suction cup 60" with:

"As shown in Figure 2, suction cups 60 are preferably used as a supporting means to mount the calibrator 1 to a surface (e.g., a substantially vertical surface). It is to be understood that a torque produced by the weight of the electronic and optic components is substantially supported by the case 10."

B. In the Detailed Description of the Invention section of the Applicant's Specification, on page 4, beginning on line 1, please replace the paragraph beginning with "As shown in Figure 2," and ending with "electronics and optics" with:

"As shown in Figure 2, one embodiment of the housing component of the invention, referred to as the case 10, is designed as a symmetric two piece puck with a top half 12, shown in Figures 9A-C, and a bottom half 14, shown in Figure 2. The two halves resemble hemispheres that join together by fastening means, such as male and female components and a ridge and groove combination 20a. The two halves are hollow inside to store electronic and optic components, 210 and 220, respectively, of the invention. Reference is made to U.S. Patent No. 6,163,377, incorporated by reference herein, issued on December 19, 2000 and assigned to the present assignee, describing exemplary electronics and optics."

C. In the Detailed Description of the Invention section of the Applicant's Specification, on page 3, beginning on line 22, please replace the paragraph beginning with "The top of," and ending with "support structure 30" with:

"The top of the support structure 30 may have a cavity 32 surrounding the center of the support structure 30. The underneath 35 of the cavity 32 contains a fastening means, such as multiple female fasteners 16. On the top of the top half 12 of the case 10 there are fastening means, such as male fasteners 15, shown in Figure 9A. The fasteners are primarily for securing the support structure 30 to the case 10. In addition, the cavity 32 contains a fastening means, such as the side walls 36 and 36a of the cavity 32, for securing a cap 50 (i.e., the cap 50 is pressure fit into the cavity 32) with a logo of the product to the support structure 30."
